

Sales Performance Dashboard

Objective:

To design an interactive dashboard that helps business stakeholders monitor sales performance, profitability, customer trends, and regional performance.

Tool Used:

- Power BI

Dataset:

- Superstore Sales Dataset

KPIs Included:

- Total Sales
- Total Profit
- Total Orders
- Profit Margin %

Interactive Features:

- Year Filter
- Region Filter
- Category Filter
- Segment Filter

Key Business Insights

1. Technology category generated the highest sales revenue among all product categories.
2. The West region delivered the highest profit, indicating strong business performance in that market.
3. Consumer segment contributed the largest share of total sales compared to Corporate and Home Office segments.
4. Sales showed an overall upward trend over time, demonstrating business growth.
5. A small group of customers contributed a significant portion of total revenue, highlighting the importance of customer retention.

Recommendations & Conclusion

Recommendations:

- Increase focus on high-performing product categories.

- Expand operations in profitable regions.
- Develop loyalty programs for top customers.
- Monitor low-profit areas and improve efficiency.
- Continue tracking sales trends for better forecasting.

Conclusion:

The dashboard provides a comprehensive view of sales, profit, customer behavior, and regional performance. Interactive filters enable stakeholders to explore data efficiently and make informed business decisions based on real-time insights.
